

MedOne Ultra

Programmable automatic biopsy system

MedOne Ultra programmable automatic biopsy system is designed with a powerful spring firing mechanism to obtain a high-quality biopsy sample.

Its one-handed usage and lightweight design make it easy to manipulate. It holds a 25 mm penetration depth and a 20 mm sample notch.

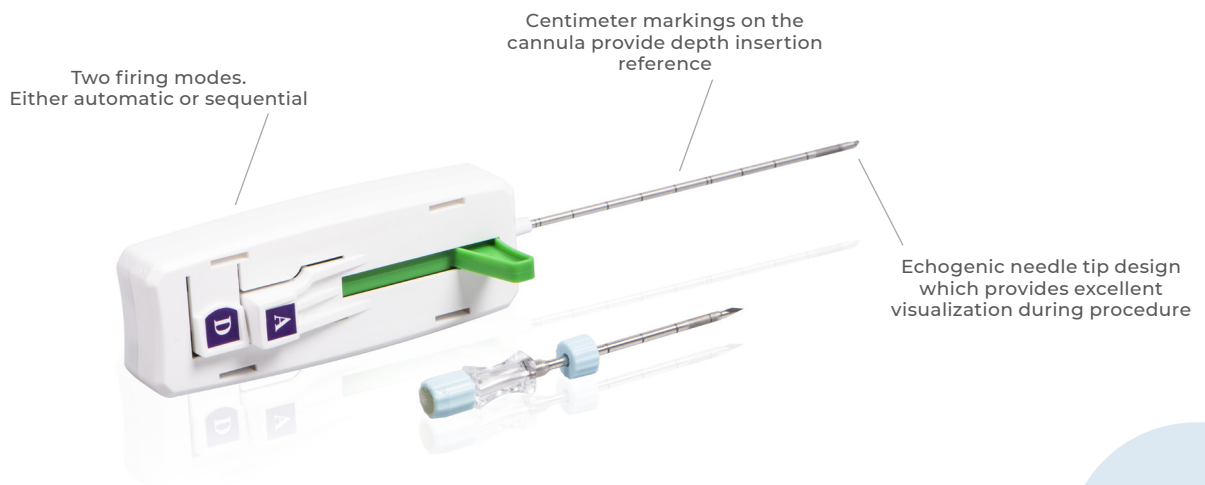

MedOne Ultra features automatic or sequential firing modes;

D: Delay firing mode to visualize needle stylet sample notch placement within a lesion before activating the cutting cannula.

A: Automatic firing mode releases the stylet and cannula in rapid sequence capturing specimen by pushing a single button.

Features:

- Automatic or sequential firing modes
- 25 mm penetration depth to gain high-quality 20 mm tissue samples
- One-hand use leaves the physician able to operate the ultrasound probe
